JUAN JEONG

ARC 206
Geometry and Architectural Representation
Spring 2026

1. Draw three squares that have a length of 10 inches.

2. Move the squares where two squares are on the x-axis and the last square above the square on the left of the two on the bottom.

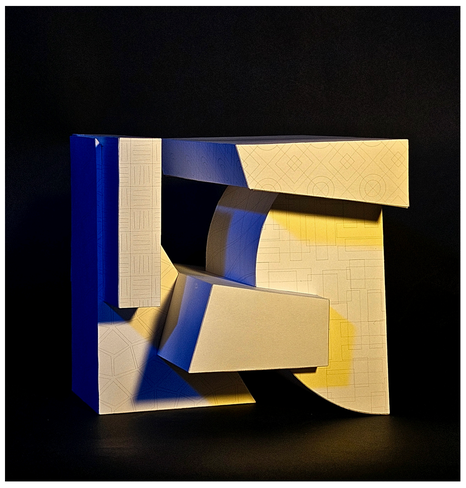

3. Space each square by 2 inches from neighboring squares.

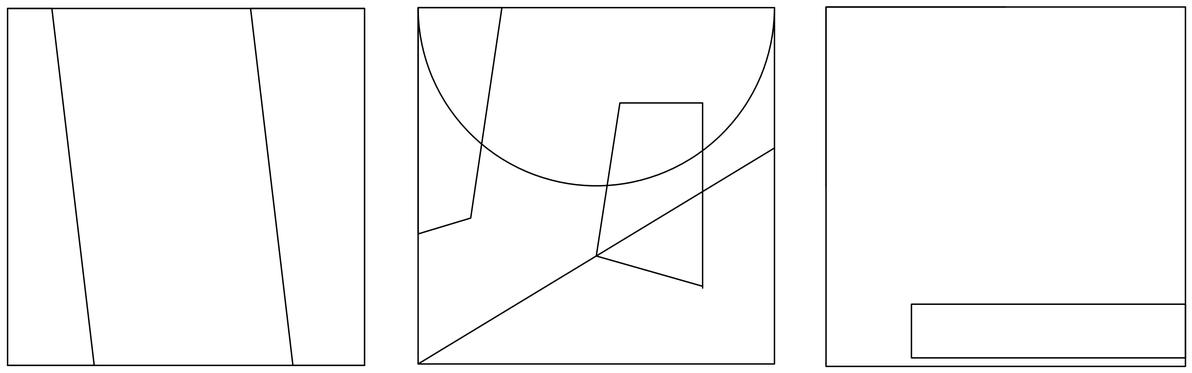

4. Make the shapes accourding to the directions below.

    For the bottom left square:
    a. Make a trapezoid:
        - 1.5 inches for the edge that touches the bottom left side of the square.
        - 6 inches for the base that touches the bottom side of the square
        - 8 inches for the edge that is parallel to the base
        - Connect the last open side.

    For the bottom right square:
    a. Draw a circle with diameter of 10 inches.
    b. Align the center of the circle to the center of the top side of the square.
    c. Trim the circle that is out of the square.
    d. Connect a line from 4 inches down from the top right corner to the bottom left corner

    For the top right square:
    a. Connect a line that is 3 inches left of the top right corner to 2 inches left of the bottom left corner.

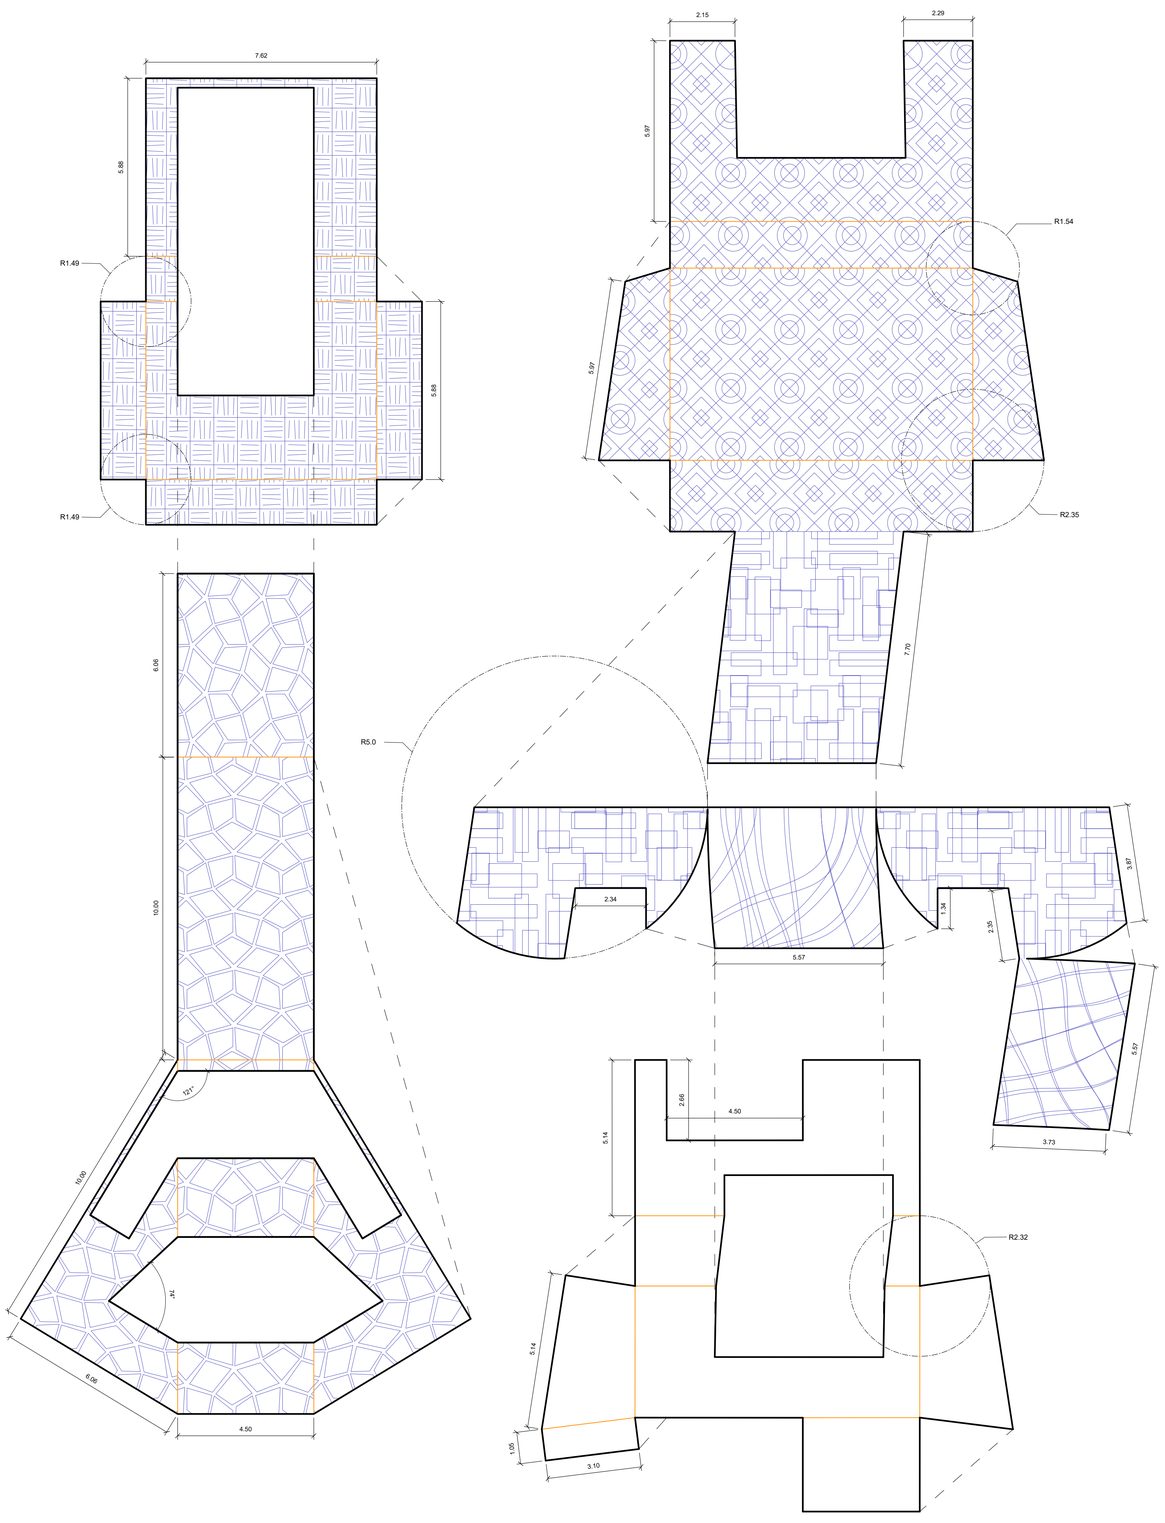

Prompt 01: Derivation of the Square

0.5” = 1.0”

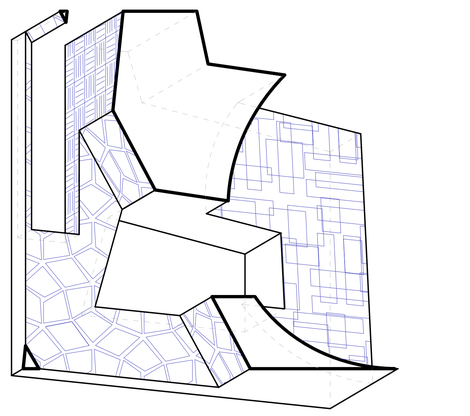

Prompt 05 and 06: Dimetric Drawing and Projected Shadows

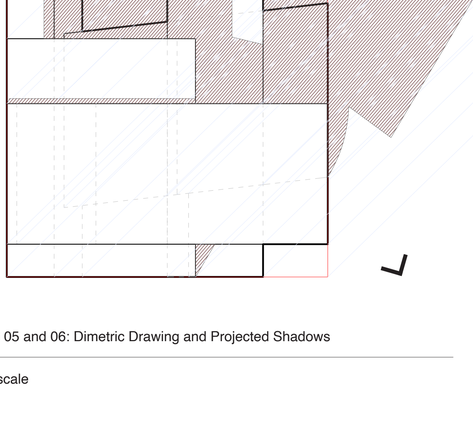

Not to scale

Prompt 03: Annotated Unrolled Surface Drawing

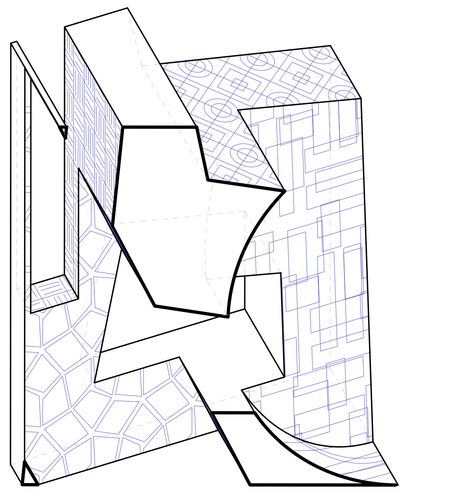

Not to scale

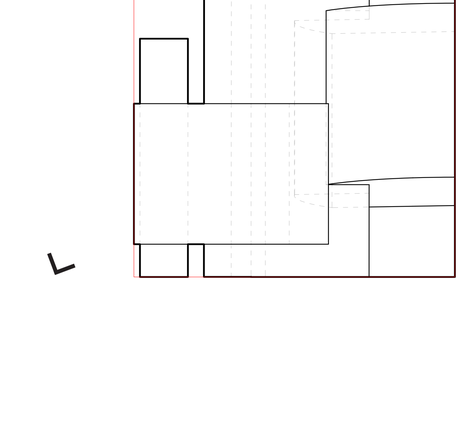

Prompt 07A: Section Drawing

Not to scale

Prompt 08A: Oblique Section
